

Drinking water quality and waste water management

The Council is participating in both the Green and Blue Drop accreditation systems as required by law. The Blue Drop system addresses drinking water and the Green Drop waste water (sewer effluent). Water tests are done by DWA, RANDWATER and the in-house laboratory at Deneysville. The Council has been assessed as to their status within the Blue and Green Drop systems and is awaiting the results that will be made public during May 2011. Both water qualities are within the set standards.
