WATER SUPPLY ALERT FOR METSIMAHOLO RESIDENTS

Metsimaholo Local Municipality informs all residents that the Rand Water Sasolburg Reservoir level has dropped to 63.41% due to pumping challenges at the Vereeniging pumping station. The issue stems from an electrical supply problem on the Emfuleni side, affecting the pumping capacity at the Vereeniging station.

The Municipality assures residents that the situation is being closely monitored, and necessary actions will be taken if Rand Water does not resolve the issue promptly. While the water supply remains stable, prolonged disruptions at the pumping station could impact water availability. Residents are urged to use water sparingly to help maintain supply levels during this period.

Further updates will be communicated as the situation develops.

We appreciate your cooperation and understanding.
