ELECTRICITY OUTAGE IN ZAMDELA

Metsimaholo Local Municipality wishes to inform all residents of Zamdela that we are currently experiencing a complete electricity outage affecting all areas of Zamdela due to a major fault at the main substation.

The outage was caused by a faulty cable located behind the main substation panel, which burned out and released carbon onto all the surrounding panels. This has resulted in a full system trip of the entire main substation.

Our municipal electrical team has been working tirelessly to clean and stabilise the substation panels. In parallel, a service provider has been officially appointed and will be on-site **tomorrow, Friday, 11 July 2025**, to complete the necessary repairs and finalise all restoration work.

We understand the severe inconvenience this has caused and sincerely apologise for the disruption to your daily lives. Your patience during this emergency is deeply appreciated.

Please be assured that every effort is being made to restore electricity as swiftly and safely as possible. Residents will be kept updated through our official Metsimaholo Facebook page.

We thank you for your understanding and cooperation during this time.
